

## Squishy Soap

Use your rockin' math skills to measure out different ingredients and make your own soap! Use your squishy soap to mold different shapes and keep it by the sink. Sing some songs or practice counting to 20 while you scrub! You've never had this much fun washing your hands!

### Supplies:

- $\frac{1}{4}$  cup of cornstarch
- 2 tablespoons pure liquid castile soap (optional: try scented!)
- 2 teaspoons of oil (vegetable, almond, coconut)
- Optional – 1 to 2 drops of food coloring for fun!
- Bowl
- Spoon
- Tray

### Instructions:

1. Carefully measure each of the ingredients into a bowl and mix with a spoon.
2. Dump the mixture onto a clean tray and knead until the soap is smooth and not sticky!
3. To use, pull off a small piece of the soap, add water, and scrub for 20 seconds!

*Tip: if soap is too sticky add a little more corn starch, if dough is too crumbly add a little more oil. Keep kneading and keep experimenting until you get it right!*
